

Wireless Communications – the Key to Business Continuity and Resiliency

Building a wireless network can be challenging. **Funding the project can also present some unique challenges, especially for building owners, portfolio managers and enterprises seeking to ensure their infrastructure investment journey will lead to a 5G destination.**

WIN's unique financing options are a fresh approach to addressing the connectivity challenges needed for businesses to maintain competitiveness in today's marketplace. **WIN offers unique financing options for investments in wireless networks that allows you to manage cashflow and achieve optimal end-user experiences.** Whether it is in-building cellular DAS, Wi-Fi, or Private 4G/5G, WIN can help you solve your connectivity challenges so you can focus on your business.

Connectivity-as-a-Service

Wireless. Simplified. WIN's Connectivity-as-a-Service (CaaS) solution provides full wireless connectivity to your building, enterprise, or venue without upfront capital expenditure by the property owner. Purpose-built for your specific needs, WIN designs, builds, and operates the network with the most advanced technology to ensure top-quality user experience for your staff, tenants and visitors, and rich analytics and Service Level Agreements (SLAs). CaaS solutions can comprise Distributed Antenna Systems, Private LTE/CBRS and Wi-Fi, or any combination thereof using a converged cellular and Wi-Fi solution. All solutions deployed by WIN will be 5G-ready at initial deployment.

For Neutral Host deployments, there are no delays waiting to obtain carrier interest and funding from the carriers before building the solution. WIN manages the coordination with all the wireless operators to provide cellular signal for each operator. CaaS includes all deployment considerations including planning, network design and ongoing support and maintenance. Connectivity-as-a-Service (CaaS) allows enterprises to take advantage of a future-ready network that performs at the speed of business with minimal capital outlay and maximum technology enablement.

WIN Owned and Operated

A WIN owned network is a Neutral Host network initially funded by WIN. It is designed, built, and operationalized with at least two carriers at the outset. WIN performs all carrier coordination, network design and project management, and will install and maintain a future-proof 5G-capable network for the term of the agreement.

Enterprise Owned and Operated

Enterprises today understand that wireless connectivity is the critical 4th utility. WIN offers a complete set of design and build services for the enterprise that desires to own and operate the network under the traditional IT or Telecom umbrella. Whether it is Distributed Antenna Systems with 5G-ready technology, Private LTE / CBRS or Wi-Fi, WIN will help in vendor selection, network design and ongoing optimization. WIN's deep expertise in integration services will ensure an optimal network buildout that ensures a rich User Experience for years to come.

WIN is the ideal blend of experience and innovation to lead you through your wireless journey. To learn more, please visit us at:
